

Software Development/Cybersecurity - Final Examination Rubric (100% equates to 75% of the overall project)

	H1 (80 - 100)	H1 (70 - 79)	H2.1 (60 - 69)	H2.2 (50 - 59)	Pass (40 - 49)	Fail (0 - 39)
Communication (5%)	The project argument was proffered in a manner that was beyond the normal programme expectations for the presentation. Slides were error-free and logically presented. The speaker was poised and enthusiastic. Questions were answered beyond the expectation of the programme.	The project argument was outstandingly clear in the presentation. Slides were error free and logically presented. The speaker was poised and enthusiastic. Questions were outstandingly answered.	The project argument was very clear in the presentation. Slides were error-free and logically presented. The speaker was poised and enthusiastic. Questions were very well answered.	The project argument was clear in the presentation. Slides were error free and logically presented. The speaker was poised and enthusiastic. Questions were well answered.	The presentation adequately outlined the project argument. Slides were adequately presented. The speaker was poised and enthusiastic. Questions were adequately answered.	The presentation inadequately outlined the project argument. Slides were inadequately presented. The speaker was inadequately presented and lacked enthusiasm. Questions were inadequately answered.
Innovation (10%)	Evidence of exploiting or using a new idea or leading edge feature of new or emerging technology beyond the programme expectations	Evidence of exploiting or using a new idea or leading edge feature of new or emerging technology to an outstanding degree	Evidence of exploiting or using a new idea or leading edge feature of new or emerging technology to a very good degree	Evidence of exploiting or using a new idea or leading edge feature of new or emerging technology to a good degree	Evidence of exploiting or using a new idea or leading edge feature of new or emerging technology to an adequate degree	Inadequate evidence of exploitation or use of any new idea or leading edge feature of new or emerging technology.
Difficulty (15%)	A project that addresses complex issues in the area of a specialisation, beyond the programme expectation.	A project that outstandingly addresses complex issues in the area of specialisation.	A project that demonstrates to a very good degree the addressing of complex issues in the area of specialisation.	A project that demonstrates to a good degree the addressing of complex issues in the area of specialisation.	A project that adequately addresses complex issues in the area of specialisation.	A project that fails to addresses any complex issues in the area of specialisation.
Completeness (10%)	Project has commercial potential and addresses all requirements that have been documented beyond the programme expectation.	Project is showing commercial potential and addresses all requirements that have been outstandingly documented.	Project is showing commercial potential and addresses all requirements that have been documented.	Project demonstrates effort but is not at the standard of commercialisation potential.	Project demonstrates adequate effort but is not at the standard of commercialisation potential.	Project demonstrates inadequate effort and is not at the standard of commercialisation potential.
Technology & Implementation (30%)	Implementation of the system as demonstrated by the students own coding / artefact development which is beyond the programme expectation. Use of coding / data analysis principles beyond programme expectations.	Outstanding implementation / artefact development of the system as demonstrated by the students own coding / data analysis. Outstanding use of coding / data analysis principles.	Very good degree of implementation of the system as demonstrated by the students own coding / artefact development. Very good use of coding principles / data analysis principles.	Good degree of implementation of the system as demonstrated by the students own coding / artefact development. Good use of coding principles / data analysis principles.	Adequate implementation of the system as demonstrated by the students own coding / artefact development. Adequate use of coding principles / data analysis principles.	Inadequate implementation with obvious functionality lacking. Inadequate use of coding principles / data analysis principles.

Documentation (10%)	The technical documentation is organised and written to the standard of a research thesis using proper Harvard Referencing Style (HRS). All relevant information has been integrated beyond the expectation of the programme.	The technical documentation is outstandingly organised and written using proper Harvard Referencing Style (HRS). All relevant information has been outstandingly integrated.	The technical documentation is very well organised and written using Harvard Referencing Style (HRS). All relevant information has been substantially integrated.	The technical documentation is well organised and written using Harvard Referencing Style (HRS), although not perfectly. All relevant information has been integrated.	The technical documentation is adequately organised and written but there are very few references and Harvard Referencing Style (HRS) is not used. All relevant information has been adequately integrated.	The technical documentation is unsatisfactory and incomplete without any referencing.
Testing (10%)	Validation and testing as evidenced by system testing, integration, class & unit testing.	Outstanding testing as evidenced by system testing, integration, class & unit testing.	Very good testing as evidenced by system testing, testing of several classes or several programs that combine into a system.	Good testing as evidenced by class or program testing.	Adequate evidence of testing of operations in a class or a functions in a procedural program.	Inadequate evidence of testing of operations in a class or a functions in a procedural program but with some misconceptions.
